

Strategic and Operational Optimization

Implementing any new systems, optimizing your existing systems, and improving your business workflow processes are all essential projects in the quest to optimize an organization's operations. Frequently, these are undertaken as separate efforts which can result in a disconnected overall workflow. MMY's Strategic and Operational Optimization service guides clients in establishing a framework for organizing, automating and analyzing business methodologies, metrics, processes, and systems that will drive business performance and assist in achieving the optimal state.

Capabilities and Benefits

Workflow Process Review:

- Workflow process current state
- Identify areas for improvement (findings / projects)
- Recommendations for improvement (Best Practice)
- Create workflow process for future state
- Create metrics to measure process flow improvement
- Risk mitigation strategy for maintaining status quo

Reporting and Benchmarking:

- Establish baseline measurements
- Create applicable benchmarks for all areas (Best Practice)
- Monitor and measure progress toward benchmarks
- Monitor Key Performance Indicators (KPIs) and Key Performance Drivers (KPDs)

The optimization cycle consists of a continuous process of monitoring the appropriate metrics, looking for a variance from the targets or norms, then determining an approach to address the issue. Why not leave the heavy lifting to the experts?
