

## Featured Project:

### VCU Health Community Memorial Hospital / C.A.R.E. Building

Location: South Hill, VA

Hospital: 167,000 SF

Medical Office Building: 67,000 SF

MMY Consulting provided IT infrastructure project management services during design and construction of VCU Health Community Memorial Hospital's new acute care replacement hospital. The facility has 70 private patient rooms, three operating rooms, a cesarean section suite, cardiac catheterization lab, 16-bay emergency department, and obstetrics unit. The hospital also includes a full complement of diagnostic services including MRI, CT, nuclear medicine, cardiac, vascular, and pulmonary studies. A new two story comprehensive medical center named the "C.A.R.E. Building" was constructed adjacent to the hospital that houses eight primary and specialty care physician practices, cardiac and pulmonary rehab, hospital administration, human resources, health information management, education/conference rooms and a dental clinic set to open late 2018.

MMY worked closely with the owner, builder, and contractors on both facilities to plan, procure, and manage the implementation or integration of critical technologies including

- Nurse call system
- Low voltage design review and validation
- Wired and wireless network
- Building automation systems
- Pneumatic tube systems
- WAN connectivity
- Cell signal enhancement
- Computer and printer deployment
- Technology integration
